---

This sounds like a FOIA request to me.....

It has the results of the Remedial Investigation, including sample tables, maps, nature/extent of contamination, river modelling, discussion of geology & hydrology, site history, plus a lot more.

Sure, I'll check. What does that report contain?

Jennah,

The sampling results for San Jacinto are quit extensive; if she wants the data since 2008, then a FOIA request would be best. But, the Remedial Investigation Report and addendums would probably have what she wants and could be emailed to her; can you check with her & see if that would be acceptable?

Thanks,

Hi Gary,

A reporter from the Houston Press called this morning asking about dioxin testing/monitoring results for the San Jacinto River. She is looking for results from 2008 til now. Is that something you can access easily? Would she have to submit a FOIA?

Thanks,  
Jennah
